# GRINDING GUIDE HTC SYSTEM

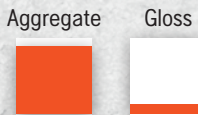

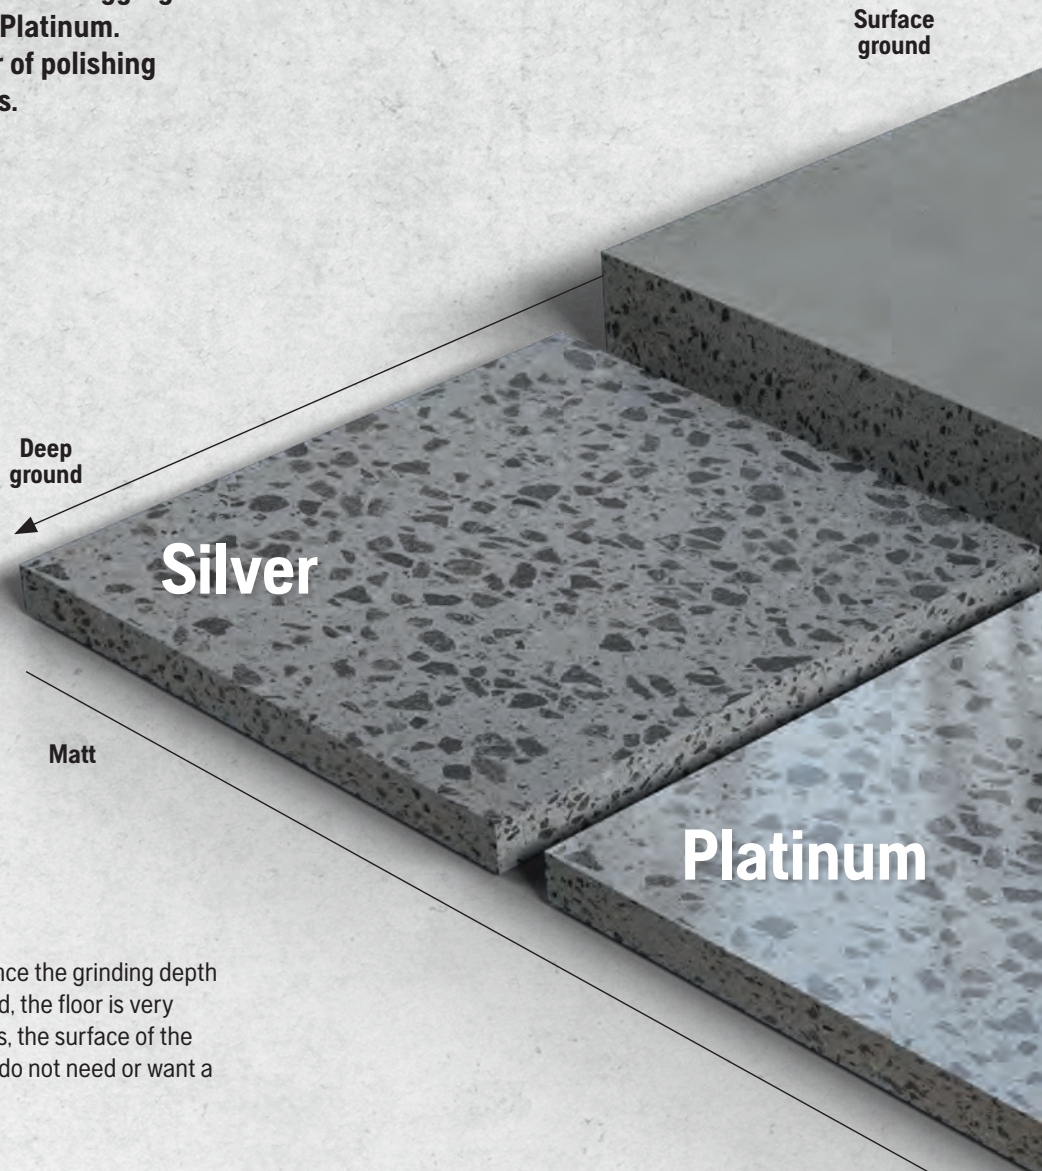

**FLOOR GRINDING SOLUTIONS BY HUSQVARNA**

FOR A BETTER WAY OF WORKING

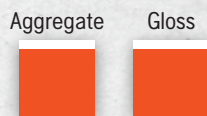

# WHICH SUPERFLOOR™ CONCEPT IS RIGHT FOR YOU?

HUSQVARNA SUPERFLOOR™ is available in four different surface finishes and degrees of aggregate exposure: Bronze, Silver, Gold and Platinum. It's the grinding depth and number of polishing steps that differentiate the finishes.

## SUPERFLOOR™ SILVER

Silver is a less glossy variant of Platinum. Since the grinding depth is the same and aggregate is widely exposed, the floor is very strong. Yet, because of fewer polishing steps, the surface of the floor will be matte. A good choice when you do not need or want a highly reflective floor.

## SUPERFLOOR™ PLATINUM

Platinum is the best of the best. By repeatedly grinding and polishing the floor, you get a smoother, more even floor with more aggregate exposure and unmatched resistance to wear. Platinum is the most popular surface finish and is a good choice for most applications.

Aggregate Gloss

## SUPERFLOOR™ BRONZE

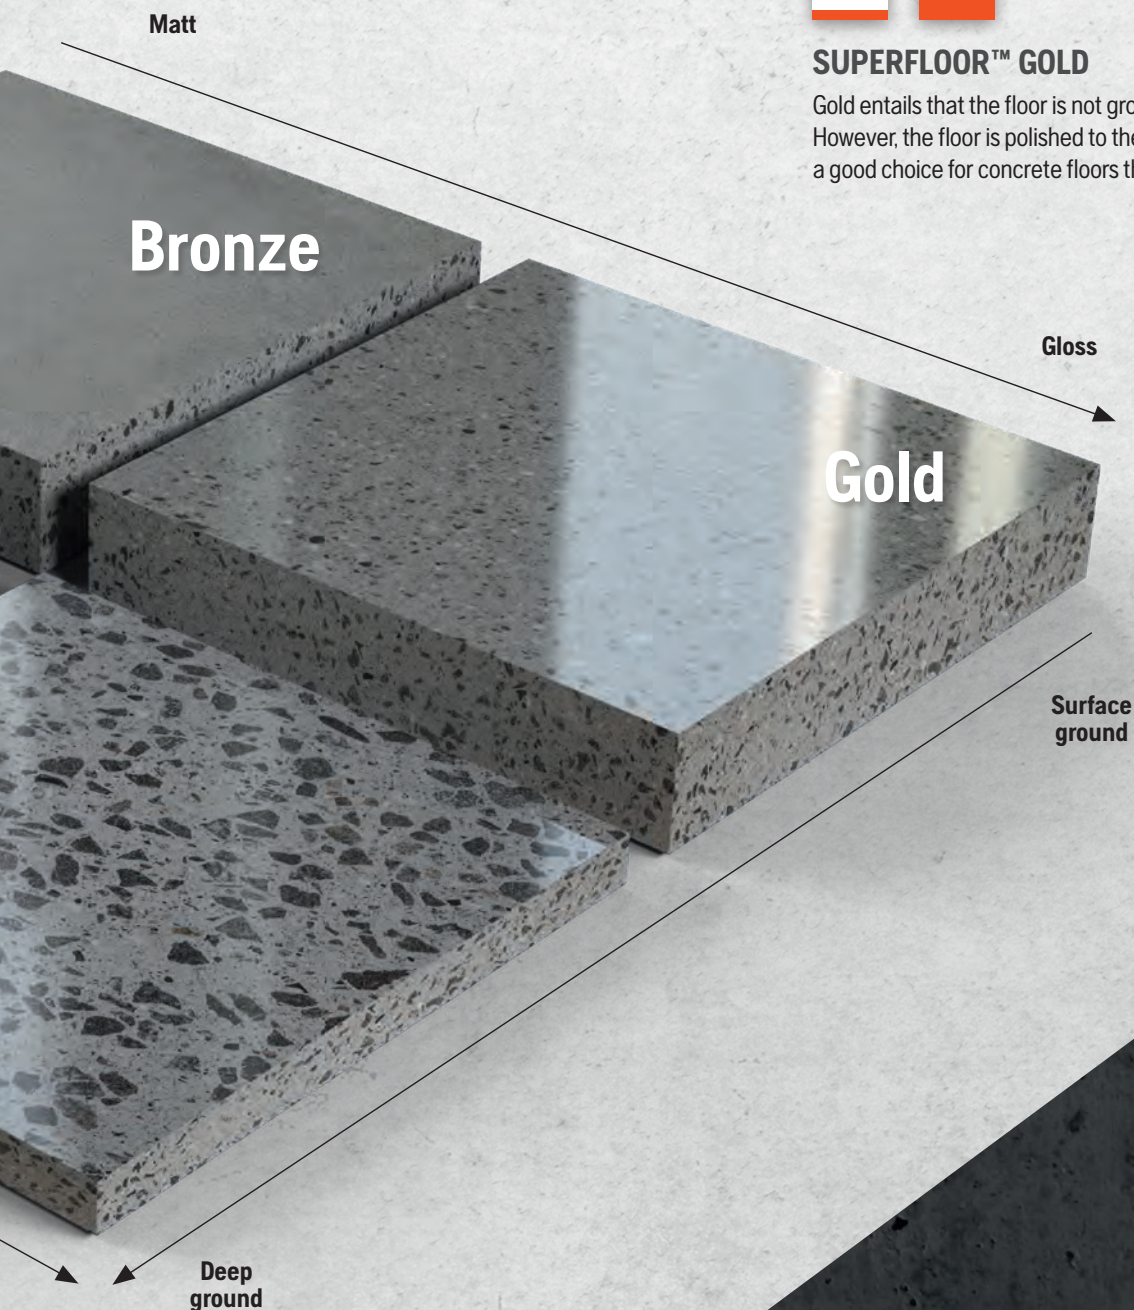

With its finely honed upper layer, Bronze is the simplest Superfloor™. The aggregate will not be visible. This produces a smooth and matte surface with somewhat lower resistance to wear. Best in applications with limited wear.

Aggregate Gloss

## SUPERFLOOR™ GOLD

Gold entails that the floor is not ground as deep as with Platinum. However, the floor is polished to the same gloss. Gold can therefore be a good choice for concrete floors that are already smooth and even.

**SUPERFLOOR**

**THE CUSTOM FLOOR**

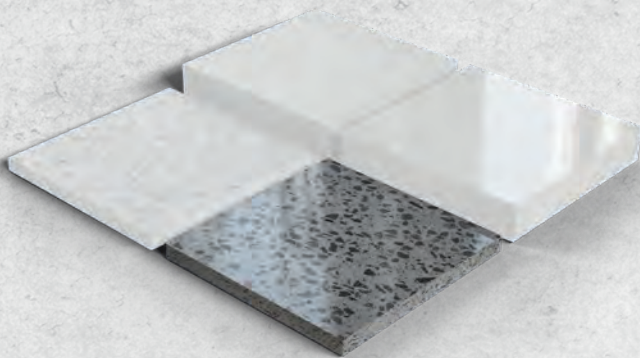

Besides the four concepts Bronze, Silver, Gold and Platinum, you can also have a custom finish that matches your specific preferences.

# HUSQVARNA SUPERFLOOR™

## – PROCESS GUIDE

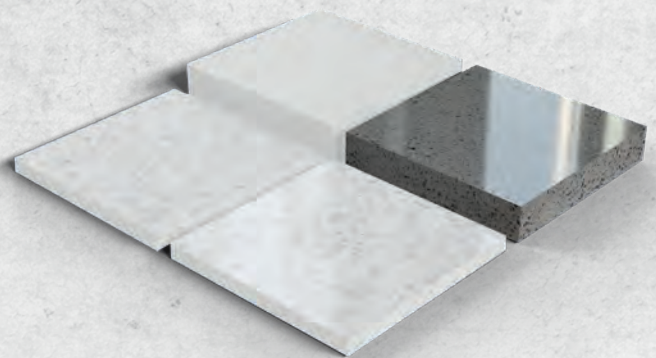

### SUPERFLOOR™ PLATINUM

The intention of the first grinding step is to create a surface that is as flat as possible. It is the foundation for a good end result. All subsequent grinding steps must remove the scratches from the previous grinding step. Depending on the properties of the floor all steps might not be needed. Resin-bonded diamond tools should be used with a flexible tool holder.

### SUPERFLOOR™ GOLD

Coarse/flat grinding is not included in this concept. This requires that the surface is already smooth and flat, otherwise – use the grinding process for Superfloor™ Platinum. All subsequent grinding steps must remove the scratches from the previous grinding step. Depending on the properties of the floor all steps might not be needed. Resin-bonded diamonds should be used with a flexible tool holder.

### SUPERFLOOR™ SILVER

The intention of the first grinding step is to create a surface that is as flat as possible. It is the foundation for a good end result. All subsequent grinding steps must remove the scratches from the previous grinding step. Depending on the properties of the floor all steps might not be needed. Resin-bonded diamonds should be used with a flexible tool holder.

### SUPERFLOOR™ BRONZE

This is a process for honing an already smooth and even concrete surface. It works well on intensely steel trowelled concrete and hard concrete or dry-shake toppings. Resin-bonded diamonds should be used with a flexible tool holder. Fenix pads usually work best.

# NATURAL STONE / CEMENTITIOUS TERRAZZO

## MARBLE / CEMENTITIOUS TERRAZZO / LIMESTONE

An initial application of a thin layer of self-levelling compound over the tiles protects the sensitive edges during surface leveling, at the same time as it enables use of our highly efficient metal tools.

## WET GRINDING

## MARBLE / CEMENTITIOUS TERRAZZO / LIMESTONE

Initial grinding using SGW rings requires an HTC grinder due to the cross-attachment system.

# EPOXY TERRAZZO / DESIGN FLOORS / CEMENTITIOUS TOPPING

## WET GRINDING

### EPOXY TERRAZZO

Epoxy terrazzo can also be grinded dry but we recommend wet grinding to minimize the risk of discoloration. The below process is our basic recommendation but may have to be adjusted depending on the specific floor characteristics.

### DESIGN FLOORS OR CEMENTITIOUS TOPPING

Adapt tool choice to maximize efficiency and wear rate on the material you work with.

STEP	GRIT SIZE	TYPE OF TOOL	CHEMICAL
1	40	EZ H3	
2	80	EZ H4	
3	50	FT82	
4			GROUTING*

# FLOOR PREPARATION & COATINGS REMOVAL

With Superprep tools, you can tackle the toughest removal jobs. The thickness of the coating you want to remove determines which tool (and technique) to use. Make sure you have an adequate dust extractor connected to your floor grinder for best results.

Coatings 0–1 mm Surface levelling	Coatings 0–2 mm	Coatings 1–3 mm	Coatings > 3 mm	Bush hammering tool

# CONCRETE GRINDING

For standard concrete grinding, the hardness of the concrete (according to Moh's scratch test) determines which tool series to use: from S for soft concrete to XX for extremely hard concrete.

Uneven or weak concrete causes more wear on the tools. Check the tools for wear after 10 minutes. Tool wear should not exceed 1mm. in 30 minutes.

# HUSQVARNA TOOL SELECTOR APP

## SAVE TIME AND FIND THE RIGHT TOOL FOR THE JOB

Through the Husqvarna Diamond Tools Selector app, you will now be able to save valuable time and find the right equipment for the right job, every time. By using the app to calculate a complete list of diamond tools and chemicals needed, you'll be able to do fast estimations and answer quotations quicker. Available for download and use by registered Husqvarna customers.

Scan to download.
