What makes us unique.

Surface protection for cementitious floors

Innovation, quality, and reliability in wet-chemical surface protection.

Cementitious surfaces like concrete, screed, and terrazzo are protected by tailored solutions, offering durability and resistance. Trust our expertise to sustainably protect and visually enhance your floors.

Core Competence

We develop customized surface protection solutions for cementitious floors. Precise protection, based on analysis and advanced technologies, ensures optimal performance and durability. Close collaboration with our customers allows us to meet individual requirements.

Innovation

OBTEGO AG focuses on continuous innovation. Through ongoing testing and field trials, we create tailored systems. Close collaboration with our application engineers ensures practical solutions. Our focus is on sustainability, environmental compatibility, and longevity.

Research & Development

Our department is committed to quality and innovation. Using modern technologies and close collaboration, we develop practical, efficient solutions that are continuously improved. Our goal is to exceed market demands. Research and development are the core of our innovative strength.

Our Products.

We provide solutions for **cleaning, protecting, refining, and maintaining** cementitious floors. They prevent soiling, stains, and mechanical impacts and are ensuring long-lasting shine. At the same time, they protect against chemical exposure, enhance resistance, and improve aesthetics. With our cleaners, impregnations, sealants, and maintenance products, we enable simple, highly effective, and durable applications for professional users.

Application Engineering

Our application engineers will assist you in selecting and implementing the right products and support you throughout your project.

Seminars

We regularly organize seminars at our headquarters to ensure the optimal use of our products. Participants gain comprehensive insights into our systems and their practical applications.

Inventory Management

Our efficient inventory management enables us to respond quickly to customer requests and ensure uninterrupted supply.

OEM Management

As an original equipment manufacturer, we offer tailored solutions for European companies. Our OEM management ensures customized products for your specific requirements.

Trust that Pays Off: Long-term partnerships with the industry, trade, and commerce.

Surface Preparation.

The OBTEGO SP-Series

Products for surface preparation are included in this series. All products are optimally coordinated with subsequent OBTEGO products.

OBTEGO also relies on high-quality raw materials with a high active ingredient content in its preparation products.

OBTEGO SP-100 / OBTEGO SP-100L

Pore filler/grouting for grinded/polished floors. Liquid compound based on various silicates and polymers.

The OBTEGO X-Series

These products are suitable for small repairs, filling cracks, drill holes, concrete damages, as well as joint filling of cementitious floors in new construction and renovation.

The advantage lies in the wide temperature range and rapid curing, which enables rapid further processing or use.

OBTEGO X-100

Low-viscosity primer for OBTEGO X-200 and X-300. Primer for better adhesion on mineral substrates. 2-component MMA (methyl methacrylate).

OBTEGO X-200

Highly elastic, modified methacrylate resin for joint filling/grouting and sealing mineral substrates.

OBTEGO X-300

Solvent-free 2-component methacrylate resin mortar with high compressive and flexural strength.

Pre-Treatment.

The OBTEGO P-Series

The perfect products for pre-treatment of surfaces. Whether as pre-impregnation, primer, or functional product to improve surface properties, they are often an essential component of the OBTEGO systems. Products from the P-Series are generally always used in combination with a subsequent special impregnation as part of a system. All products are optimally matched to the special impregnations of the OBTEGO R-Series.

OBTEGO also relies on high-quality raw materials with a high active agent content for its pretreatment products.

OBTEGO P-2

Highly reactive lithium silicate for the densification and hardening of cementitious surfaces.

OBTEGO P-3

Highly reactive mixed silicate of lithium and potassium silicates for the densification and hardening of cementitious surfaces.

OBTEGO P-4

Highly reactive mixed silicate of lithium and potassium silicates for the densification and hardening of cementitious surfaces with basic protection.

OBTEGO P-5

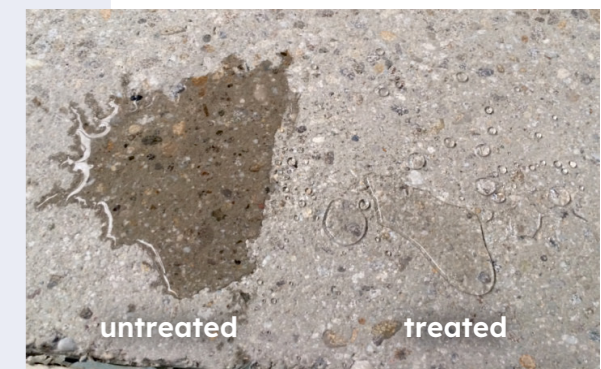

Highly reactive mixed silicate of lithium and potassium silicates for the densification and hardening of cementitious surfaces with basic protection and a gloss effect.

OBTEGO P-10

Pre-impregnation for cementitious surfaces to reduce absorbency.

OBTEGO P-20/20 nV

Water-based primer based on an acrylic copolymer with water-repellent properties to reduce the absorbency of highly porous substrates such as screed and leveling compounds.

Specialized Impregnations.

The OBTEGO R-Series

It includes a range of premium products for the protection of cementitious surfaces. Our offerings span from cost-effective options to high-end protection.

The specialized impregnations from OBTEGO are used, for example, in industrial environments, on production and logistics areas, in museums, hypermarkets, shopping centers, and more.

OBTEGO R-30

Highly reactive hybrid lithium silicate with integrated basic protection against staining agents.

OBTEGO R-40

Pigmented 2K specialized impregnation based on lithium silicate.

OBTEGO R-50

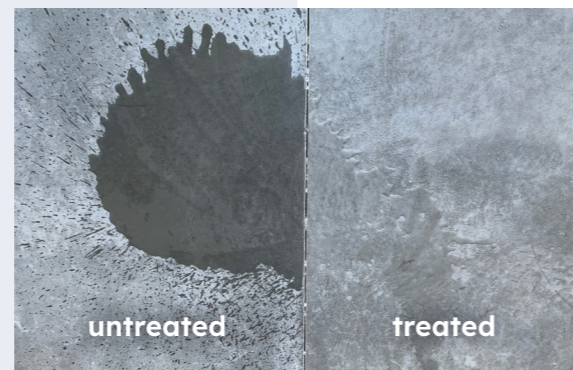

Water-based hybrid impregnation for cementitious surfaces.

OBTEGO R-400

Solvent-based specialized impregnation based on silane, with excellent water and oil repellency.

OBTEGO R-405

Water-based specialized impregnation based on silane, with excellent water and oil repellency.

Cleaning & Maintenance.

The **OBTEGO C-Series** includes cleaners and maintenance products for the regular cleaning of water-resistant surfaces.

The series provides products for private, commercial, and industrial applications. All products in the **OBTEGO C-Series** are perfectly aligned with the protective products of the **OBTEGO R-Series**.

Only high-quality raw materials are used for all **OBTEGO** cleaners and maintenance products, which is reflected in the high efficiency of the products.

98% 

Biodegradable.

The surfactants used are made from environmentally friendly ingredients and are 98% fully biodegradable.

This not only contributes to environmental protection but also ensures a sustainable cleaning solution that is both effective and responsible.

The OBTEGO C-Series

OBTEGO C-10

Highly effective alkaline basic cleaner for professional deep cleaning of dirty floors (also suitable for natural stone).

OBTEGO C-100

Maintenance cleaner for mineral floors with 98% biodegradable surfactants.

OBTEGO C-105

Maintenance cleaner for cementitious industrial floors.

OBTEGO C-200

Wipe care (maintenance) with a new, improved formula, suitable for use on exposed screeds, terrazzo, as well as design floors and self-leveling compounds.

OBTEGO C-205

Wipe care (maintenance) with a new, improved formula, suitable for use on concrete floors and industrial screeds.

OBTEGO C-240

Wipe care (replenishing effects) for use on exposed screeds, terrazzo, as well as design floors and self-leveling compounds.

Our Special Products.

OBTEGO Concrete Coat Si

Our innovative 1K hybrid thin coating based on silicium. Ideal for new floors, patchy concrete surfaces, and older floor coverings.

Concrete Coat Si is an innovative, single-component hybrid coating specifically developed to protect cementitious surfaces, built on an entirely new binder system. The product is available in both transparent and colored variants and is highly versatile – suitable for new flooring, patchy concrete surfaces, and for old coverings in need of renovation.

OBTEGO Concrete Dye

High-quality dyes enable the subsequent coloring of cementitious surfaces and ensure particularly durable, resistant results. These solutions offer individual design possibilities.

These dyes are not only versatile but also optimally adapted for the impregnations of the **OBTEGO R-series**, thereby ensuring maximum protection and improved durability of the colored surfaces. This way, you combine aesthetics and functionality in one step.

Renovation.

Concrete floors are exposed to enormous loads, having to withstand high mechanical impacts, chemicals, and intense stress daily. Therefore, even the best industrial floor must be renovated after years of intensive use.

A **timely renovation** can be better and more cost-effective than a new concrete floor. For renovations, OBTEGO AG offers numerous products from their portfolio.

Together with the use of suitable floor preparation machines, old floor coverings regain their shine and strength. Our solutions are used, for example, in renovating industrial floors in commercial establishments, market halls, logistics centers, supermarkets, and more. Renovation of terrazzo and design floors is also possible with OBTEGO solutions and products.

Another milestone is now the renovation of holes, breakouts, cracks, and joints with our SP and X-products.

Surface Renovation

Are you looking for a suitable solution for your worn-out cementitious surfaces?

Our OBTEGO products are perfect for use in new buildings and ideally suited for renovating older and stressed surfaces. We bring your floors back to top condition – resistant and long-lasting.

Individual Solutions

Every floor is different and has different requirements.

Therefore, we develop a customized solution for each floor type that precisely meets your requirements and needs. This ensures that you receive the best possible renovation solution.

Consultation & Expertise

We would be happy to discuss personally with you which products are ideal for your floor.

Together, we will find a solution that precisely meets your specific requirements, fulfills your individual expectations, and simultaneously extends the service life of your floor sustainably and in the long term.

Reference Projects

Save the Floor, Save Costs.

Cost savings through renovation instead of new construction. A timely renovation offers not only functional advantages but is often also more cost-effective than completely replacing a concrete floor. Replacing a complete floor covering requires significant investments in material, labor time, and potentially the shutdown of the affected area, which can lead to production downtimes or restricted use.

With OBTEGO solutions, floors can be quickly restored, minimizing downtime and restoring the original functionality and appearance – at significantly lower costs.

Savings through

- **Reduced Costs**
Material & labor costs are saved.
- **Lower Operation Downtimes**
Standstill times in the business are minimized.
- **Longevity**
Longer load-bearing and deployment capability of the floor.

1 Location for Maximum Quality.

Our production combines **precision and reliability**. At the Altheim location in Essenbach, we manufacture our products in close collaboration between research, development, and application technology. Here, we rely on the latest technologies that enable us to develop innovative solutions at the highest level.

Thanks to our **very modern production facility** in Germany, we guarantee the highest standards in manufacturing and processing, which not only ensures long-lasting and robust products but also increases the efficiency and sustainability of our processes. This way, we secure the best possible quality for our customers and create trust in our solutions.

Research & Development

Close collaboration between research, development, and application technique.

Production

Start of manufacturing in the highly modern production facility in Altheim, equipped with the latest technology.

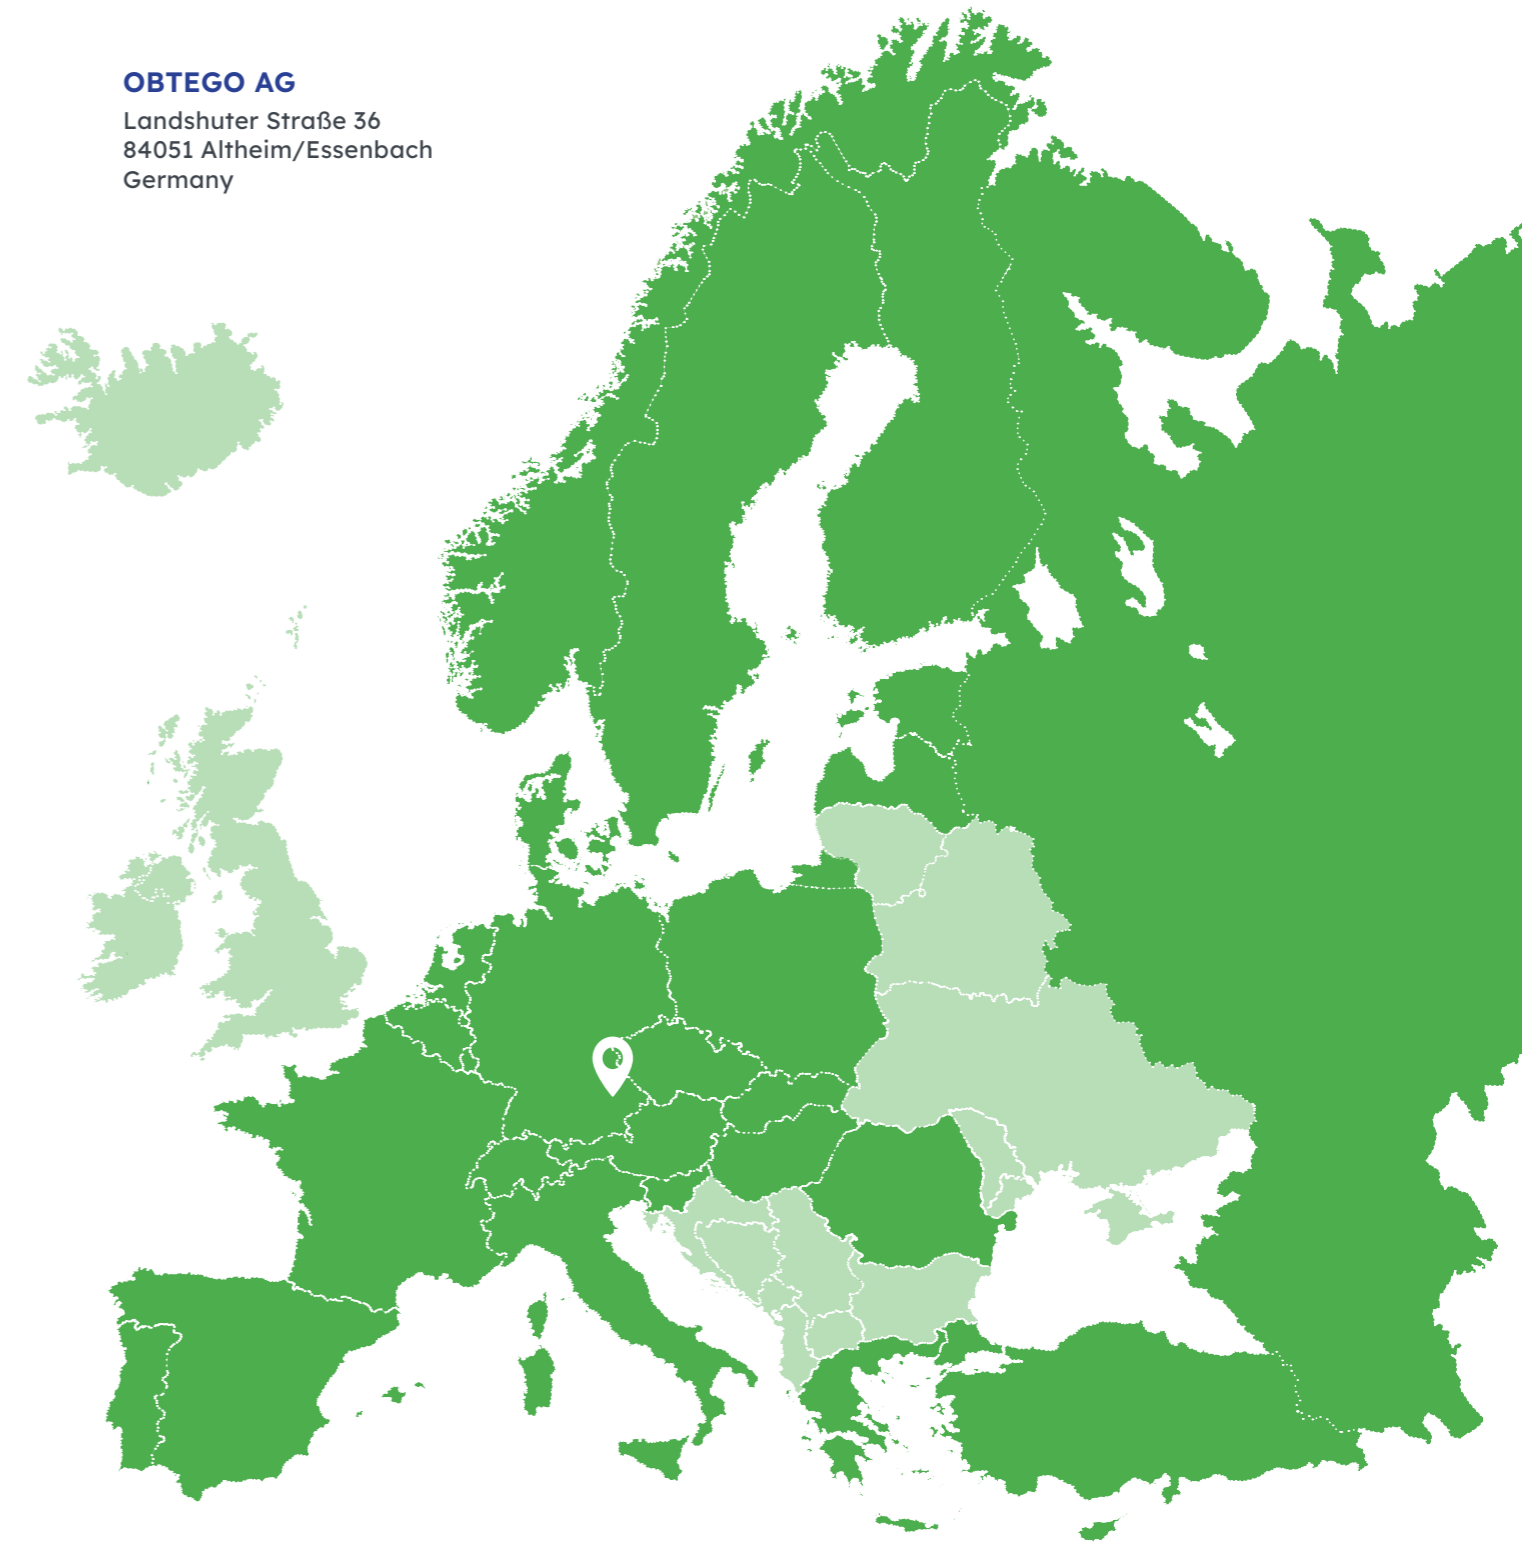

Quality Control

Ensuring the highest standards in manufacturing and processing.
